An older version of solr

4

An older version of `solr-tomcat` and `solr-jetty` is in the Ubuntu Universe repositories, **for a newer version see below.**

```
sudo add-apt-repository universe
```

For Tomcat

```
sudo apt-get install solr-tomcat
```

For Jetty

```
sudo apt-get install solr-jetty
```

Open the URL `http://localhost:8080/solr/admin/`, if your tomcat is listen on port 8080.

Uninstall

```
sudo apt-get remove solr-tomcat
sudo apt-get remove solr-jetty
```

A newer version of solr

Use the manual installation for a newer version, check the latest version [here](#) and replace the version in the commands below, for old versions check [here](#)

```
cd ~
wget http://archive.apache.org/dist/lucene/solr/5.3.1/solr-5.3.1.tgz
tar xzf solr-5.3.1.tgz solr-5.3.1/bin/install_solr_service.sh --strip-components=2
sudo chmod +x install_solr_service.sh
sudo ./install_solr_service.sh solr-5.3.1.tgz
```

Open the URL http://your_server_ip:8983/solr

[More details](#)

Uninstall via

```
sudo service solr stop
sudo rm -r /var/solr
sudo rm -r /opt/solr-5.3.1
sudo rm -r /opt/solr
sudo rm /etc/init.d/solr
sudo deluser --remove-home solr
sudo deluser --group solr
```

For a better explanation of the uninstall steps, read my answer [here](#).

Seems to me the latest release is 5.3. 14.04 has 3.6. – [muru](#) Sep 24 '15 at 9:51
