Chapter 1: Points and lines

- Chapter 1: Points and lines
- Points
  - The distance between two points
- Lists of Points - the PointList class
  - Integer point lists
  - Ordered Point sets
- Extreme Points of a PointList
- Random sets of Points not in general position
- Displaying Points and other geometrical objects
- Lines, rays, and line segments
  - The geometry of line segments
- Displaying lines, rays and line segments
- Summary

Chapter 2: Polygonal chains in two dimensions

- Chapter 2: Polygonal chains in two dimensions
- Polygonal chains
  - Simple polygonal chains
  - Monotone polygonal chains
- Summary

Chapter 3: Triangles and the relationship of points to lines

- Chapter 3: Triangles and the relationship of points to lines
- Polygons
  - Representing polygons in Python
- Triangles
  - Signed area of a triangle
- Triangles and the relationships of points to lines
  - isCollinear, isLeft, isLeftOn, isRight, isRightOn
  - Between
  - Demo program for relationships between points and lines
- Points in general position
  - Probability of a random point set being in general position
- The relationship of points to the half-plane
- Summary

Chapter 4: Triangle geometry

- Chapter 4: Triangle geometry
- The centroid, medians and circumcircle of a triangle
  - Circumcenter from perpendicular edge bisectors
  - Circumcircle from distances to vertexes
- The internal angles of a triangle
- Triangulating a triangle with an internal point
- Random triangles
- Summary

Chapter 5: Polygons

- Chapter 5: Polygons
- Polygon edges
- Polygon indexes and modular arithmetic
  - Splitting a polygon
- A polygon class
- Regular polygons
  - Regular star polygons
- Monotone mountain polygons
- Convex polygon areas
  - Triangulate the convex polygon
  - Sum the areas of the triangles
  - The total number of convex polygon triangulations
- General polygon areas
- Summary

Chapter 6: Random polygons

- Chapter 6: Random polygons
- Random polygons
- Random simple star shaped polygons
  - Step 1: Generate a random polygon
  - Step 2: Choose an origin
  - Step 3: Sort anticlockwise
  - Step 4: Loop until no collinear triples
  - Random star shaped polygons using the rightmost lowest vertex
  - Comparing origins for random star shaped polygons
- Point lists to star shaped polygons
- Summary

Chapter 7: Intersections

- Chapter 7: Intersections
- Types of intersection of line segments
    - Proper intersection of line segments
    - Improper intersection of line segments
    - Intersection of line segments
    - Demonstrating the intersection functions
- Point of intersection of two lines
- The relationship of points to convex polygons
    - Test for polygon convexity
    - Point inside convex polygon
- Line segment intersection with a polygon
- Polygon self intersection and simple polygons
- Summary

Chapter 8: Polygon extreme points, tangents, monotonicity and splitting

- Chapter 8: Polygon extreme points, tangents, monotonicity and splitting
- Polygon extreme points
- Monotone polygons
- Tangent to a convex polygon from a point
- Splitting a convex polygon across tangent vertexes
- Summary

Chapter 9: Convex hulls

- Chapter 9: Convex hulls
- Incremental convex hull algorithm
- Graham scan convex hull algorithm
- Comparison of incremental and Graham scan convex hull algorithms
- Summary

Chapter 10: Polygon triangulations

- Chapter 10: Polygon triangulations
- Polygon diagonals
    - Finding polygon diagonals
- Polygon triangulation by ear tip removal
- Summary

Chapter 11: Point set triangulation and dual graph

- Chapter 11: Point set triangulation and dual graph
- Triangle-splitting triangulation algorithm
- Simple incremental triangulation with convex hull
- Finding the edges in a triangulation
- Finding the triangles for an edge in a triangulation
- The dual graph of a triangulation
    - Analysing a triangulation using graph theory
- Visibility graph of a polygon
- Summary

Chapter 12: Optimal triangulation

- Chapter 12: Optimal triangulation
- Angle vectors
- The MinMax and MaxMin criteria
- Triangulation deviation from equiangular
- Delaunay triangulation
- Flipping diagonals
- Converting a triangulation to a Delaunay triangulation
- Voronoi diagrams
- Summary
